

Beyond Denim @ 2025 Intertextile Shanghai Apparel Fabrics – Spring Edition

Advance Denim Co., Ltd
Booth No: Hall 7.2-E35

Advance Denim Co., Ltd is one of China's pioneering denim fabric manufacturers and ranks among the largest enterprises in Guangdong Province dedicated to producing high-quality denim. Recognized as a national high-tech enterprise, it boasts a comprehensive supply chain within the fabric industry. The company focuses on creative design, technological innovation, and sustainable development, offering thousands of independently developed high-end denim products while holding multiple patented technologies. The company has also been rewarded prestigious titles, such as "National Green Factory" and "National Manufacturing Individual Champion Enterprise", highlighting its global industrial structure and operational expertise. Over its 30 years of history, the company has remained committed to environmental protection and resource recycling, leveraging its rich heritage of craftsmanship to transform denim into one of the most environmentally friendly fabrics, particularly in the realms of new materials and functional apparel.

Main Featured Products in 2025 Intertextile Spring Edition Bohoblu Collection

Fresh and clean, with pure colours and a subtle elegance. This lightweight denim fabric embodies “luster” and “layering”. Advance Denim captures the natural phenomenon of “ambilight” and weaves it into denim, allowing light to be worn. This collection features a range of pure indigo shades, preserving the denim's original texture while radiating freshness and vitality, ensuring a comfortable wearing experience.

Deep Glow Denim Collection

Vintage-washed, rich color gradation, and environmentally sustainable. A simple rinse reveals a complex and nostalgic color palette that harmonizes with the trending Y2K aesthetic. This approach highlights the unique beauty of denim, utilizing Advance Denim's innovative dyeing technology to achieve dual-tone effects. Compatible with a variety of washing treatments, it effortlessly unlocks an array of captivating vintage denim looks.

New Cooling Technology in Denim Fabric

Light and refreshing, skin-friendly and comfortable, antibacterial and odorless. Advance Denim has developed a novel cooling technology denim fabric, specifically designed for spring and summer. It delivers long-lasting comfort and a refreshing experience, perfect for summer adventures. This fabric not only offers a cool and odorless experience, but also combines sustainability with fashion, making it an ideal choice for summer outfits.

Zhejiang Jinsuo Textiles Co., Ltd
Booth No: Hall 7.2-E38

Established in 1998, Zhejiang Jinsuo Textiles Co.,Ltd is a modern large-scale manufacturing enterprise specializing in the research, development, production, and

sales of denim fabric. With over 900 Picanol weaving machines dedicated to denim production, the company produces exceeding 90 million meters of various high-end denim fabrics annually. The company has earned numerous honors, including the China Well-known Trademark, National Green Factory, and China Export Commodity Brand. Demonstrating strong competitive advantages in technological innovation, product quality, and cost-effectiveness, the company continues to excel in both domestic and international markets.

Main Featured Products in 2025 Intertextile Spring Edition

Eco-friendly Blue Denim Fabric

Crafted with bio-based natural amino acid dyes produced through fermentation technology, this fabric boasts a natural composition of up to 97%, highlighting its environmentally friendly characteristics. Within just 28 days, it achieves a biodegradability rate of 43%, with zero aniline and formaldehyde, making it skin-friendly, eco-conscious, and safe for mothers and infants. Upon its launch, it achieved the USDA Certified Biobased Product label and was selected for the USDA BioPreferred Program, quickly becoming a new favorite in denim dyeing.

Elastic-Stable Denim Fabric

This innovative fabric features a uniform covering structure and stretching model crafted with elastic core-spun yarns, delivering a 10% increase in yarn strength and a 41% reduction in break strength variability. This effectively addresses the challenge of achieving consistent elasticity in denim. Additionally, its advanced dyeing technology, equipped with a movable dry area and twisted device, maintains the total dye rate for the yarn below 12% while boosting enhancement rates by 15%. This ensures exceptional dimensional stability for loosely structured weft-elastic fabrics and elastic body-shaping knit-like structures, significantly improving the fabric's recovery rate from deformation.

All-rounded Stretchable Sports Leisure Denim Fabric

Through optimized elastic covering silk processes and advanced weaving technology, this fabric enables faster and more efficient bi-axial weaving. With precise compensation for fabric tightness, the technology ensures the smoothness and consistency of all-round stretchable products. By carefully controlled finishing process parameters and providing stable support to double elasticity, the fabric achieves exceptional performance metrics: a bi-directional stretch of J8×W60% for elastic elongation, J98×W92% for elastic recovery, and J1.5×5.5% for elastic growth. This innovative fabric is perfect for energizing the world of sports and leisure activities.

Antibacterial Healthcare Denim Fabric

The antibacterial healthcare denim fabric is crafted from a blend of premium natural fibers, including Artemisia fiber, bamboo fiber, EcoCosy fiber, and cotton fiber. This innovative textile is formed by weaving these specialized yarns together. Artemisia fiber releases negative ions and emits far-infrared rays, contributing to health benefits, while bamboo fiber provides breathability and moisture absorption, along with natural antibacterial properties and UV resistance. Derived from eucalyptus, EcoCosy fiber is naturally antibacterial and biodegradable, supporting environmental sustainability. By integrating these functional fibers with cotton, the fabric achieves a harmonious effect that enhances overall comfort.

Marble Pattern Denim Fabric

The fabric features a differentiated design that incorporates various yarn counts, twist levels, and draft ratios for both the warp and weft. This precise approach creates defined shrinkage spaces in the warp and weft directions before sewing. Through a multi-level washing process and techniques, the fabric is meticulously crafted, like a passionate sculptor dedicated to nature, resulting in naturally stunning textures. This process unveils a three-dimensional world filled with endless variations for you.

Lyocell Light Denim Fabric

The innovative use of non-cotton cellulose fibers, such as ultra-fine Lyocell, Gracell, and Tencel, brings a silky-smooth texture to denim design. This fabric seamlessly integrates elements like mugwort, EcoCosy, and long-staple cotton, creating skin-friendly products dyed with amino acids and finished with eco-friendly desizing. The combination of these components results in a light, antibacterial, environmentally friendly fabric that is low-carbon and biodegradable, offering a unique and irresistible blend of sustainability and comfort.

Breaking news - Lyocell and Tencel Denim Fabric

The development of Lyocell and Tencel for denim products brings exquisite yarn textures and a soft feeling, achieving a suede-like appearance after washing. By incorporating innovative elements such as bamboo fiber, graphene, biodegradable polyester, and bio-based dyes, the fabric showcases even more highlights. The fabric sparkles like fireflies on a warm summer night and evokes the depth of a starry blue sky, creating a uniquely captivating experience in every thread.

Black Peony Textile Co., Ltd
Booth No: Hall 7.2-C39

Black Peony Textile Co.,Ltd is located in the advanced manufacturing hub of China, Changzhou in Jiangsu Province with offices in Hong Kong, Tokyo, and Dhaka, Bangladesh. The company focuses on brand development, technological innovation, and customer service, maintaining a comprehensive denim industry chain. With an annual production capacity of 80 million meters of denim fabric and 3.5 million garments, it is a key drafting unit for industry standards such as "Yarn-Dyed Denim" and the "Technical Specification for Green Design Products Assessment". Over the years, the company has earned numerous accolades, including recognition as a "National High-Tech Enterprise", "China Quality Credit Enterprise" and "National Green Factory".

Main Featured Products in 2025 Intertextile Spring Edition

Clean relaxed

Freedom and relaxation harmonize as body and soul synchronize in moments of liberty. Cotton, linen, Tencel, and indigo come together to create a soothing melody, embodying the natural beauty of these materials and conveying a relaxed lifestyle. The tranquil and unadorned shade of indigo brings life back to its essence, returning to the purest state. Every glance evokes calmness, and wearing these fabrics envelops you in comfort. The visible silhouette complements a relaxed attitude, allowing one to pursue comfort and a sense of freedom amidst the busyness of life. Embrace a refreshing, breathable lifestyle that celebrates ease and tranquility in everyday living.

Foshan Foison Textile Co., Ltd.
Booth No. : Hall 7.2-A40

Foshan Foison Textile Co., Ltd., founded in 2005, has consistently focused on craftsmanship innovation as its core and quality as its foundation, delivering high-

quality textile products to its customers. The company enjoys an excellent reputation among its clients and holds a significant market share in the denim fabric industry. It has been known as the contracting enterprise, excellent enterprise, the best partner, and safety management advanced unit such as title.

Main Featured Products in 2025 Intertextile Spring Edition

Since 2008, Foison Textile has been participating in the Intertextile twice a year. The company highly recognises Intertextile as the largest and most influential textile industry exhibition in China and across Asia, playing a vital role in staying ahead of industry trends. Through the fair, Foison Textile has identified key industry trends such as "lightweight, comfort, easy care, and eco-friendliness" while also benefiting from the event's high visitor traffic and diverse mix of new and existing customers. At the 2025 Intertextile Spring Edition, Foison Textile will continue to target mid-to-high-end brands, showcasing its expertly crafted new denim innovations, including the flocked denim fabric FB1878T-HZR and printed denim fabric FB1906T-YBL, designed to inspire and bring more possibilities to customers' designs.

Product Name (Article No): FB1878T-HZR

Composition: 100% Cotton

This innovative flocked denim fabric combines creative design with advanced craftsmanship, injecting new vitality into your fashion inspiration! Ideal for high-end fashion applications, it is perfect for creating limited-edition statement pieces such as pants, jackets, and dresses, ensuring each creation becomes a focal point. This fabric also offers the versatility to seamlessly blend business and casual styles, meeting the formal requirements of professional settings while adding a trendy edge to leisurewear.

A. Luxurious Texture and Enhanced Comfort

Crafted using a flocking technique, this denim fabric delivers a velvet-like softness that feels delicate and warm to the touch. Whether used for pants or outerwear, it provides an unparalleled wearing experience.

B. Unique Aesthetic with a Premium Look

The fabric surface showcases a rich, layered pile that blends seamlessly with the classic denim blue. Combined with a distinctive washing effect, it creates a visual language of understated luxury, offering a sophisticated and high-end appeal.

Product Name (Article No): FB1906T-YBL

Composition: 100% Cotton

The fusion of creativity and craftsmanship breathes new life into denim fashion! The new printed denim fabric combines unique textures with classic denim elements to unlock endless design possibilities. This fabric is ideal for trendy apparel design, suitable for high-end customisation in pants, jackets, skirts, and more, meeting the personalised needs of fashion brands. By blending street and high street styles, these fabrics effortlessly cater to both street trends and high-fashion design, creating garments that set new fashion trends. Additionally, these fabrics can be extended to home textiles and accessories, perfect for stylish home fabrics, backpacks, hats, and more, showcasing unique design aesthetics.

A. Personalized Prints with Artistic Appeal

The fabric surface features naturally dynamic prints, reminiscent of abstract paintings. By integrating artistic elements into denim, this fabric exudes a unique charm and enhances the overall visual impact.

B. Durable and Comfortable High-Quality Denim

Using premium denim weaving techniques, the fabric ensures excellent durability and breathability. It also maintains a lightweight and soft feel, meeting both comfort and durability needs.

C. Fusion of Trend and Classic

The deep integration of prints and denim breaks the monotony of traditional denim, making it perfect for creating fashion items that blend trendiness with classic appeal.

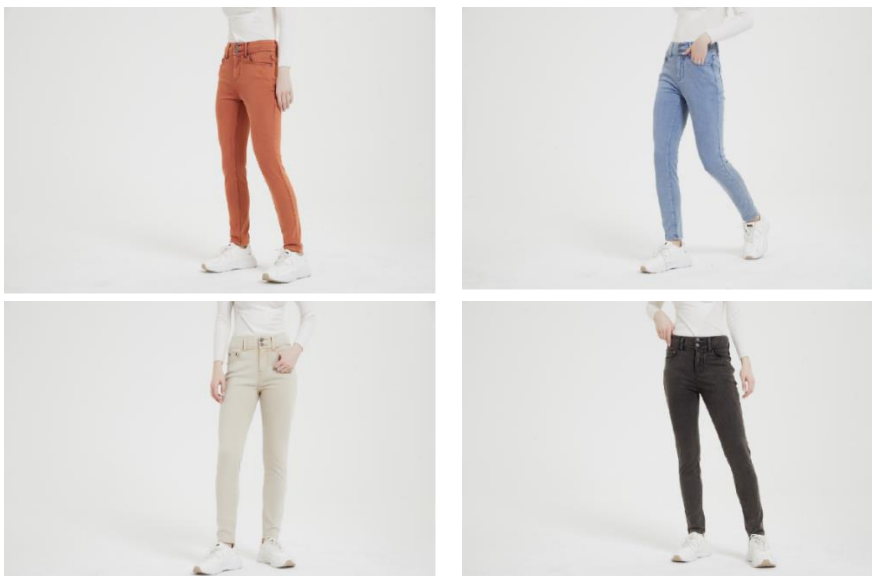

Jiangsu Landuo Knitting Garment Co., Ltd.
Booth No. : Hall 7.2-G26

Jiangsu Landuo Knitting Garment Co., Ltd. is a medium-sized textile enterprise specialising in the manufacturing, R&D, and trading of knitted denim fabrics. With an annual production capacity of 5,000 tons (about 10 million meters) of denim fabrics, Landuo Knitting's product line caters primarily to children's wear, women's pants, men's t-shirts, and other high-end clothing. The company proudly holds certifications including GRS, OCS, RCS, Regenagri, and OEKO-TEX, and is a national high-tech enterprise and a provincial pioneer in specialised and innovative textile production.

Main Featured Products in 2025 Intertextile Spring Edition

At the 2025 Intertextile Spring Edition, Landuo Knitting will mainly feature their "Fadable Knitted Denim" as the centrepiece. This distinctive denim fabric stands out for its colour-fading properties and encompasses a blend of benefits, including sustainability, organic composition, and functionality. Aligned with the prevailing trend towards sustainable fashion, this fabric not only offers added functionality but also equips customers with a diverse range of selling points, ensuring an unparalleled dressing experience.

Tianxi Import and Export Trading (Guangzhou) Co., Ltd.
Booth No. : Hall 7.2-A39

Tianxi Import and Export Trading (Guangzhou) Co., Ltd. is a textile enterprise dedicated to the research and development, design, production, and sales of denim fabric. Embodying a strong brand philosophy, the company has invested over 20 years in nurturing and expanding its operations, establishing a comprehensive and diversified presence in the industry encompassing clothing, denim fabric production, and trade. This dedication has culminated in a well-rounded and diversified industry presence spanning clothing, denim fabric production, and trade. Renowned for their quality, their products have garnered significant acclaim on a global scale.

Main Featured Products in 2025 Intertextile Spring Edition

At the 2025 Intertextile Spring Edition, Tianxi will showcase a diverse range of products to suit a broad clientele. Their products include luxury-grade items tailored for international high-end brands, health-focused options with antibacterial and radiation-resistant properties, thermoregulation, quick-drying, moisture-wicking, and cooling fibers, providing customers with a variety of choices based on their specific functional needs. The company also offers outdoor products known for exceptional durability, UV protection, and the use of military-grade materials. For ultimate comfort, Tianxi provides items crafted from materials like mulberry silk, hemp, acetate, and lyocell, ensuring a premium wearing experience. Their classic retro collection features 360-degree stretch elasticity and classic large denim, embodying the return of vintage denim fashion trends in everyday attire.

Zaozhuang HIYOUNG Dynasty Textile Co., Ltd.
Booth No. : Hall 7.2-C17

Zaozhuang HIYOUNG Dynasty Textile Co., Ltd. is a vertically integrated factory specialising in spinning, dyeing, weaving and finishing, with the self-owned rights to import and export goods. Renowned for its "HIYOUNG" brand, the company focuses

on the production of denim fabric and yarn, boasting an annual capacity exceeding 30 million meters of denim. Its premium products are in high demand across European and American markets, offering a comprehensive selection of over 1000 variations in heavy, medium, and lightweight categories. Moreover, the company excels in producing 10,000 tons of cotton yarn yearly, complemented by 20 million meters of greige and 26 million garment pieces.

Main Featured Products in 2025 Intertextile Spring Edition

At the 2025 Intertextile Spring Edition, Zaozhuang HIYOUNG Dynasty will showcase retro classic products, inviting visitors to immerse themselves in the allure of denim fashion. The company will also emphasise its dedication to sustainability and environmental protection by exhibiting eco-friendly denim, spotlighting its achievements and impact in utilising green materials, sustainable production processes, and recycling initiatives. Additionally, the company will pivot towards natural materials like linen, hemp, ramie, silk, wool, and cashmere, showcasing their profound exploration and utilisation. This strategic shift aims to consistently meet consumer preferences for comfort, style, and environmental awareness.
